

changed relative to the immediate prior version, except that marked up versions are not being supplied for any added claim or canceled claim.

53. (amended) The interface of claim 35 wherein the first surface opposes the third surface and defines another outermost surface of the thermally conductive composite, an average length of the fibers being greater than an average thickness from the first surface to the third surface along an average direction of the fiber lengths.

55. (amended) The method of claim 48 wherein the first surface opposes the third surface and defines another outermost surface of the thermally conductive composite, an average length of the fibers being greater than an average thickness from the first surface to the third surface along an average direction of the fiber lengths.
